RS02™

RADIAL SNOW TIRE

TOUGH WEATHER. TOUGHER TIRES.

The all-new RS02™ is a rugged winter radial tire constructed specifically for snow and ice service. Featuring an upgraded tread pattern and extensive siping, the RS02 delivers enhanced traction and performance in all winter conditions.

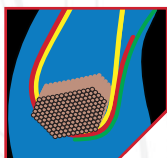

Advanced Compound and Extensive Siping

A specially formulated winter compound and hundreds of biting edges combine to provide maximum traction on snow and ice.

High Turn-Up Construction

Providing lateral stability and added sidewall protection, the high turn-up carcass means long, reliable service.

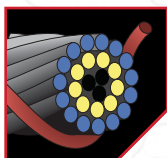

Large Hexagonal Bead Bundle

The large flat bottom bead bundle adds strength and eliminates slippage for powerful traction.

Optimized Chafer

The chafer is engineered to protect the bead area from damage during mounting—especially in cold weather.

OTR Belt Wire

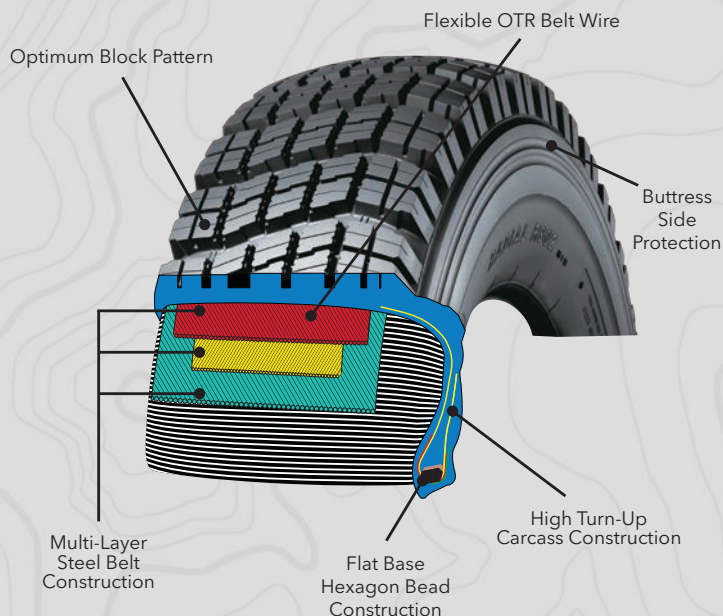

The heavy-duty belt package is protected by compound strands of wire to provide outstanding puncture resistance and long service life.

Non-Directional Tread Pattern

This versatile tread pattern makes mounting and rotating easier and extends the overall service life of the tire.

PERFORMANCE DESIGNED FROM THE INSIDE OUT.
